

## PRODUCT INFORMATION: **BEACH GLASS™**

### **APPLICATION**

Beach Glass™ is ½" thick, making it one of the strongest mosaic materials on the market. It can be used in ANY residential or commercial location: interior or exterior, on walls, counters, floors, patios or in swimming pools. Because the surface is textured, Beach Glass™ is slip resistant when wet.

We designed Beach Glass™ as the perfect compliment to most stone, ceramic and metal tile. It matches superbly with granite, limestone, slate and marble -- as well as with our own limestone and metal tile lines. Ask to see Beach Glass™ alongside other materials.

### **EASE OF USE**

Beach Glass™ mosaic field tiles and deco tiles are face-mounted on clear tape that are easy to handle and easy to place. The tape faces up (out) during installation, which permits your installer to see and control spacing. In addition, the tape leaves no glue residue once it is removed.

### **INSTALLATION**

You must use only white thin-set recommended by its manufacturer for glass tile. Simply apply the thin-set, smooth out the trowel marks (Beach Glass™ is translucent) and lay the tile with the tape facing up. Beach Glass™ can be trimmed using any wet-saw with a diamond blade meant for glass or porcelain. Once the thin-set has cured, peel off the tape and grout as you normally would with ceramic tile.

### **GROUT**

Any color polymer-modified sanded grout may be used. Be sure to check the manufacturer's specifications as they apply to your installation. The color of the grout will impart color to the glass.

### **UPKEEP**

Beach Glass™ is non-porous. A grout sealer may be used because it will not penetrate the tile. If you desire a more transparent or "wet look," periodically apply any sealer wax for wood floors (such as Tre wax™ Gold Label Sealer Wax for Wood Floors). Beach Glass™ may be cleaned with any standard floor or wall cleaner.

### **LIGHT**

Because Beach Glass™ is ½" thick, it refracts light, giving an appearance that is soft and luminous. We strongly recommend that you light Beach Glass™ once it is installed to fully appreciate its beauty.

# PRODUCT INFORMATION: **BEACH GLASS™ POOL LINERS**

## **APPLICATION**

Beach Glass™ and Beach Glass™ Pool Liners are ½” thick, making them one of the strongest mosaic materials on the market. Because their surface is textured, Beach Glass™ Pool Liners are slip resistant when wet. Though Beach Glass™ Pool Liners can be used anywhere, we specifically designed these Pool Liners for use at the water line in swimming pools and spas.

## **EASE OF USE**

Beach Glass™ Pool Liners are mounted with clear tape. The tape faces up (or out) during installation, which permits your installer to see and control spacing. Pool Liners are sold by the piece but will arrive in easy to install sections due to the layout of the repeating pattern.

## **INSTALLATION**

In general, our Beach Glass™ Pool Liners basically require standard installation techniques for swimming pools. Beach Glass™ can be trimmed using any wet-saw with a diamond blade meant for glass or porcelain. Please refer to our Pool Liner Installation Instruction Sheet for technical information.

## **GROUT**

Any color polymer-modified sanded grout may be used. Be sure to check the manufacturer's specifications as they apply to your installation. The color of the grout will impart color to the glass.

## **LIGHT**

Because Beach Glass™ Pool Liners are ½” thick, they refract light, giving an appearance that is soft and luminous. Our Pool Liners become even more intriguing when accented with our spectacular Dichro Moon Glass.
